PolderbitS Multimedia Splitter is free, downloadable software that enables you to split the audio from a media file and save the split audio in separate audio files. It is used to split a one media file into multiple parts, which you can then attach to individual tracks of a CD, DVD or video file. The software can be used for backup reasons, or for recording your game or PC audio if you don't own a sound card. The included presets help you split the media file into the same number of parts as tracks on a CD, DVD, or video file. PolderbitS DVD Creator is freeware tool that allows you to make your own DVD-video discs with movies and video files. The software enables you to convert your video files to the same file types as DVD-video files (for example, both digital vide files and DVD-video files), which you can then burn to a disc using your traditional CD-burner software. PolderbitS DVD Creator is able to perform all basic operations (including all edit functions) when it comes to creating DVD-video discs. In addition, it can render video files, e.g. the contents of your hard drive, into DVD-video files, so you can burn them onto a disc using traditional CD-burner software. PolderbitS CD Player lets you listen to the audio from your CDs, either MP3 or WAV files, in various ways, including: through your PC speakers through an external sound card through Internet radio stations through your car's radio system. PolderbitS CD Player lets you easily select the volume level and faders of each track, volume, loudness, and balance. You can also transpose, flip, or invert the audio, play and pause the track, jump to the next track, and add graphics.
